

# Just Breathe...

At Pacific Coast Trane we want breathing to be easy and worry-free. You want your customers, building occupants and employees to feel safe and at ease while residing indoors. We can help. Offices, schools, auditoriums, conference and training rooms, healthcare facilities, manufacturers and dispatch centers all benefit from clean air solutions we offer!

You can provide significant, essential air quality solutions with Genesis! We offer highly effective choices that can destroy viruses and other biological contaminants, smoke, fumes, tear gas, odors, airborne mold spores and other volatile biological contaminants (VOC's).

**TRANE**  
SAN FRANCISCO

Three effective stages, while working together, continually cleans the air in a room!

## Stage 1 **CAPTURE**

The returning room air is pulled back through a high-capacity MERV-13 filter that starts the air cleaning process.

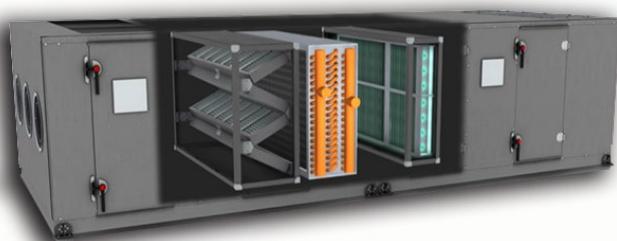

## Stage 2 **CLEAN**

Powerful ultraviolet UVGI lights are used to clean and energize the specialized, patented photo-catalyst media.

## Stage 3 **CONVERT**

Media imbedded with titanium dioxide energized by the UVGI lights cleanses the air and renders the contaminants non-viable.

The Genesis Air CenterPoint® PCO panels can be applied in Trane Catalytic Air Cleaning Systems (TCACS) air-handling units, IntelliPak light commercial rooftops, custom air-handling units or standalone for in-duct work installations. In addition, the panels can destroy COVID-19 particles found in droplet nuclei by creating free radical in the form of reactive oxygen species namely hydroxyl radicals!

Trane Air Handling Units (TCACS) and Custom AHU's
